

STUNT PLANE

You will need:

- Sticky tack
- Sticky tape
- The templates, photocopied double-sided or stick them together before they are cut out.

What you do:

1. Cut out the templates.
2. Fold the body of the plane in half along the dotted line.
3. Fold down the stabiliser tabs on the tail along the dotted lines.
4. Stick a small ball of sticky tack inside the nose end of the plane, then tape the two sides of the nose together.
5. Slightly fold along the dotted line in the centre of the wings and fold down the tabs at the back of the wings.
6. Slot the wings into the main body of the plane at points **A** and then at points **B**.
7. Now hold the plane at the nose and turn it so that the wings are vertical, as shown.
8. Throw it sideways, across your body.

You should find:

Your plane should fly around in a circle! Try throwing the plane upwards with the underside facing you and see if it loops the loop.

What if:

Try experimenting with the angle of the flaps and with different throwing techniques.
