Our solar system has eight known planets, which all orbit the Sun. You can make an awesome model, showing the planets in order of their distance from the Sun.

You will need:
- Scissors
- Sticky tape or glue stick

The model isn’t to scale because if you cut out a Sun measuring 10 cm across, the Earth at the same scale would measure less than one millimetre, and be placed 10.75 metres away!
What you do:
1. Cut out the planets, the Sun and the connecting strips.
2. Attach one end of each connecting strip to the back of the correct planet with sticky tape or glue.
3. Attach the other end of the connecting strips to the back of the Sun, and you’re finished!

The Sun is so massive it contains 99.86% of the entire mass in the solar system.
A solar system is a star and all the objects that orbit around it. Our solar system, with the Sun at the centre, has eight planets, five known dwarf planets, 149 known moons (with another 25 possible moons being investigated), more than 715,000 asteroids, more than 3,400 comets, and countless meteoroids and smaller particles of debris, left over from when the solar system formed. Much of this debris can be found in the asteroid belt between the orbits of Mars and Jupiter, and the Kuiper belt beyond Neptune.
Mercury has wrinkled, cold, Lobate escarpments up to 1 mile high.

A day on Venus lasts longer than a year on Venus.

The Earth's rotation is gradually slowing, at about 7 milliseconds per 100 years.

Jupiter's Great Red Spot is a huge storm that has raged for at least 350 years.

Mars has the largest known volcano in the solar system, called Olympus Mons.

Saturn's rings are made of lumps of ice and rock, some as small as a grain of sand, others as large as a house.

Uranus's axes tilt at almost 98 degrees, meaning it orbits the Sun lying on its side.

A year on Neptune lasts 165 Earth years.

Mercury has 'wrinkles' called Lobate Scarps, up to 1 mile high.

The Earth's rotation is gradually slowing, at about 7 milliseconds per 100 years.

Jupiter's Great Red Spot is a huge storm that has raged for at least 350 years.
